

Crash Course: **Web-Spinning**

(Publishing Personal Information on the Web)
Hands-on Workshop in the ACS AP&M B335 Mac Lab
Tuesday, January 31st, 1995 4:00-5:30pm

Goal:

Create a your own basic World-Wide-Web homepage in your Euclid account, from which you might:

- Publish your papers or work-in-progress.
- Start your own electronic journal.
- Assign homework or distribute answer sets.
- Share your biographical information, family history, pearls of wisdom etc. with other Internauts around the world.
- You'll also end up learning a bit of HTML, or Hypertext Markup Language.

It will help if you already have:

- Skill with a UNIX text editor. Brush up on `vi`, `joe`, `pico`, `emacs`, or whatever your favorite editor is. Yes, there are special HTML editors, but we're just doing the minimal *quick-start* here.
- Knowledge of each information tool presented at last Tuesday's workshop, what kind of information it is suited to distributing.
- Experience using a Macintosh mouse. Controlling windows on your screen-- scrolling, resizing, closing, and dragging. Launching and switching between applications in System 7.x.

Sign-up:

There's a 16-person limit (chairs, computers), so please sign up in advance at AP&M 6018

Please Prepare:

- A directory in your Euclid account called `~/homepage`
- If there are a few files you want to distribute via the Web, you should copy them into this `~/homepage` directory. Don't overdo it!

Please Bring:

- One Blank Macintosh-format floppy disk
- Something to write with.
